

Ex:	Create Dashboard using Tableau With student marksheet dataset
Date :	

Aim :

To create an interactive Tableau dashboard to visualize and analyze students' marks across different departments using bar charts, line charts, a pie chart, and filters.

Algorithm :

1. Import the student marks dataset into Tableau.
2. Create individual worksheets for different visualizations.
3. Create a bar chart to compare marks by department.
4. Create line charts to display marks for each student.
5. Create a table showing department, student, and marks.
6. Create a pie chart to represent marks by department.
7. Add department and mark filters to the dashboard.
8. Arrange all worksheets into a single dashboard.
9. Apply suitable titles, labels, and formatting.
10. Verify the dashboard and its interactive filters.

Procedure :

1. Open Tableau and connect to the student marks dataset.
2. Drag the required fields such as Department, Student, and Marks into the respective shelves.

3. Create the department-wise bar chart using Department and Marks.

4. Create line charts using Student and Marks, and enable mark labels.

- Create a table containing Department, Student, and Marks.

Sheet 4

Departm..	Student	Marks	Percenta..
AIDS	Karthik	88.00	88.00%
	Priya	90.00	90.00%
CSE	Arun	85.00	85.00%
	Divya	95.00	95.00%
IT	Bala	78.00	78.00%
	Ravi	72.00	72.00%

- Select the Pie Chart option from *Show Me* and use Department and Marks.

7. Create a new Dashboard and drag the created worksheets into it.

8. Arrange and resize the visualizations for proper presentation.
9. Save the completed Tableau dashboard.

Result :
